## AsparonaCloud: Local Expertise - Latest Technologies

Are you interested in transforming your IT from expensive, internally owned systems into agile, pay-as-you-go services to conduct business? Would you like the flexibility to choose between private, hybrid or community clouds with equal confidence in the integration and operation skills of your Cloud partner?

At Asparona, we have many years of experience servicing our customers' requirements across infrastructure, and managing complex business application and database platforms supported by wrap around Managed Services. With data centres based in Auckland and Hamilton, our local expertise is available to assist you with the design, implementation and management of your Cloud requirements.

## Considerations for your Cloud Strategy

Flexibility is our watchword and we believe that Cloud computing does not necessitate that existing (or legacy) IT assets be moved on to the Cloud. It may make more sense to extend on to the Cloud as opposed to migrate entirely. Our platforms and services are designed to support the wide range of scenarios in a hybrid - covering the spectrum of choices between on-premise software and Cloud-based services.

We have specialist skills in Oracle, Java, Linux, SQL and Microsoft platforms which ensure your business requirements are covered.

With today's fluctuating economy, tight budgets, technology staff shortages and ever-increasing

demands on ICT, Asparona's cloud computing solutions provide our customers a smart way to proactively respond to changing market and business needs.

## AsparonaCloud Provisioning

We design, implement and manage a multitude of Cloud platforms including:

- Private, Public, Community or Hybrid Cloud solutions
- Enterprise security ensuring protection for your applications, data, network, within secured premises
- Enterprise reliability via managed backup and recovery procedures, disaster recovery, high availability configurations and business continuity services
- Enterprise management through pro-active monitoring
- Dynamic scalability and capacity for processing, storage and environments

## AsparonaCloud Service Solutions

Do you need a full end to end service or just require some project environments provisioned quickly. We provide a range of service offerings within the Cloud to meet your needs:

- Infrastructure as a Service (IaaS)
- Platform as a Service (PaaS)
- Software as a Service (SaaS)
- Environments as a Service (EaaS)

Whether you are building a new product or transforming an existing one, we will help you to optimise your investment, minimise your risk and do it as quickly as possible. We will tailor a plan to meet your specific needs, be it short or long term, project based or production environments. Our hosting solutions are provisioned within a purpose built data centre, and meet the most stringent of SLAs.

Services are provided via AsparonaCloud locally to our New Zealand and Australian customers.

## AsparonaCloud Enterprise Solutions

Asparona currently provides Oracle E-Business Suite as a SaaS Cloud service to a number of Customers. Providing the managed services and support around business critical ERP solutions differentiates us from the average Cloud provider.

In outsourcing to AsparonaCloud, our customers realise the following benefits:

- Reduced IT operating cost
- Increased system availability (24x7) and return on investment
- Ability for the customer to focus on their core business
- Achievement of required service levels.

The results speak for themselves. Our customers receive best value for their investment.

## AsparonaCloud Infrastructure

We can provide the complete Infrastructure across all tiers including servers, storage, networks, firewalls, load balancers and more. Independent of the Cloud service solution chosen, the infrastructure can be provisioned as:

- **Private**, where we physically provision infrastructure within the AsparonaCloud, dedicated for our Customer's exclusive use.
- **Community**, where the infrastructure provisioned within the AsparonaCloud is available only to the members of the Community such as a Corporate Group, an Alliance or an Industry Sector.
- **Shared solutions**, which are provisioned from our Asparona physical infrastructure as Virtualised Infrastructure configured exclusively for a Customer to meet their performance and capacity requirements.
